

ISL Interpreter - Standalone App Guide

Portable Offline Application Instructions

1. What is this App?

This is a completely standalone, offline Desktop Application for the Indian Sign Language (ISL) Interpreter. You do NOT need to install Python, Git, or write any terminal commands to run this app. It contains its own internal engine and runs directly on Windows.

2. How to Transfer the App to a New Laptop

1. Locate the "dist" folder in your main project directory.
2. Inside "dist", you will find a folder named "ISL_Interpreter".
3. Copy the ENTIRE "ISL_Interpreter" folder onto a USB Pendrive.
4. Plug the USB into your new presentation laptop and copy the folder to the Desktop.

3. How to Run the App

1. Open the "ISL_Interpreter" folder on your new laptop.
2. Double-click the file named "ISL_Interpreter.exe".
3. Wait a few seconds. A native desktop window will pop up with the application.
4. Click the green "Start" button to turn on your webcam and begin translation!

4. Smart Sentence Builder Controls

You can build full sentences completely hands-free using these special gestures:

- Add a Word: Hold a sign steady for ~1.2 seconds.
- Double Letters (e.g., "LL"): Hold the sign for the first letter, drop your hand for a split second, and make the sign again.
- SPACE: Give a "Thumbs Up" to automatically add a space.
- DELETE/BACKSPACE: Hold your "Pinky Finger Up" to delete the last letter.
- SPEAK: Click the "Speak" button on the screen to hear your sentence out loud.
